# An unknow industry

- Pig plasma helps piglets to bridge the gap between the colostrum supplied by the mother and the immunity developed by the piglet.
- We have studies showing plasma can reduce the use of antibiotics.
- Hemoglobin is a great source of quality proteins for pigs, fish, mink, etc.
- The industry has produced numerous studies showing how the spray dry process inactivates pathogens.
- Evidence about plasma usage around the world for many years is our best presentation card.
